

# Gramy Hospital Website

Session Work Report - 24 September 2026

Project folder: D:\ho (Next.js 14 + React 18 + Tailwind 3 + TypeScript). Every change below was verified with **tsc --noEmit**, **npm run lint**, **npm run build** and real-browser scrolling/measurement (Playwright + Chrome). Final status of all three checks: **clean** (lint shows only 2 pre-existing warnings in app/layout.tsx).

| #  | Task                                            | File(s) changed                   | Status |
|----|-------------------------------------------------|-----------------------------------|--------|
| 1  | Reverted sticky-sidebar experiment              | components/SpecialistSidebar.tsx  | Done   |
| 2  | Sidebar cards scroll with page (sticky removed) | components/SpecialistSidebar.tsx  | Done   |
| 3  | Header logo back to live-exact layout           | components/Header.tsx             | Done   |
| 4  | Logo on divider line (desktop)                  | components/Header.tsx             | Done   |
| 5  | Gap between the two sidebar cards (80/50px)     | components/SpecialistSidebar.tsx  | Done   |
| 6  | Single doctor card centered (5 pages)           | components/SpecialistDoctors.tsx  | Done   |
| 7  | Hero/sidebar overlap fix (7 pages)              | components/ConditionPage.tsx      | Done   |
| 8  | Exact 20px left-content/sidebar gap (all 14)    | components/ConditionPage.tsx      | Done   |
| 9  | 5K+ REVIEWS box: exact live size                | app/page.tsx                      | Done   |
| 10 | 5K+ REVIEWS box: exact live position            | app/page.tsx                      | Done   |
| 11 | This report                                     | Gramy-Hospital-Session-Report.pdf | Done   |

## 1. Sticky-sidebar revert + scrolling sidebar

The earlier sticky experiment (*min-[1025px]:sticky top-[236px]*) was fully reverted at the user's request. The sidebar *aside* is now plain **flex flex-col with a structural gap** (no sticky, no fixed, no JavaScript), so the Services/Package card and Get Directions card scroll naturally with the page on all 14 specialist pages.

File: **components/SpecialistSidebar.tsx** - aside class; sticky comment block replaced.

## 2. Header logo: live-exact, then straddling the divider

An added *py-4* and a centered-logo grid experiment were both reverted. The navbar row is back to the live layout (logo left, *py-0*, row height = logo height ~94px, verified against live CSS *.navbar* *.navbar-brand{max-width:240px}*). Per request, the logo alone is shifted up by half its height on desktop (**lg:-translate-y-1/2** on the logo link), so its middle sits exactly on the thin divider under the About-Us row (browser-measured: divider Y=127, logo middle Y=127). Transform does not move layout - nav, Emergency button and spacing are untouched; mobile unchanged.

File: **components/Header.tsx** - one class on the logo *Link*.

## 3. Sidebar cards: 80px separation + single doctor centered

The two right-side cards use an explicit flex gap of **80px desktop / 50px mobile** (*gap-[80px] max-[767px]:gap-[50px]* on the aside) - verified at exactly 80px on all 14 pages, 50px on mobile. In **components/SpecialistDoctors.tsx**, single-doctor pages (aesthetic-medicine, anti-ageing-nutrition-medicine, cosmetic-gynaecology, neurology, prp-cartilage-rejuvenation) center the lone card with conditional *justify-center*; multi-doctor grids are unchanged.

## 4. Hero/sidebar overlap fix (7 pages)

Browser scan found left-column content running ~366px underneath the sidebar on 7 pages (the 143.907% breakout hero). The wide-hero wrapper in **components/ConditionPage.tsx** is now capped at 100% column width

(deliberate deviation from the live breakout widget). Re-scan: all 14 pages clean, screenshot-confirmed.

## 5. Exact 20px left-content / sidebar gap (all 14 pages)

Read directly off the live orthopedic-surgery HTML: section *services-details-area* uses *elementor-column-gap-default* (10px padding per column = **20px** between article and sidebar), columns 67%/33% above 1024px. Implemented in the shared grid in **components/ConditionPage.tsx**: *grid-cols-[calc(67%-10px)\_calc(33%-10px)] + gap-x-[20px]* (desktop only). Verified exactly 20px on all 14 pages with no row overflow; tablet/mobile stacking unchanged; sidebar behavior untouched.

## 6. 5K+ PATIENT'S REVIEWS box: exact live size and position

Measured the live box in a real browser (outer 154x152 at 1440px, 134x136 at 1280px, 124x142 at 390px; inner padding 15/25, 7/15 in the 1200-1399 tier, 10/10 on mobile; number row 42px). Size fix in **app/page.tsx** (second counter only): number spans *leading-none* to *leading-[1.2]*, flex *gap-1* to *gap-0*, label to *leading-[1.8]*, plus the two responsive padding tiers. Result: 153x152 / 133x136 / 123x142 - all within 1px of live; the '22 SECTIONS' box classes are byte-identical in effect. Position fix: the photo wrapper collapsed to 0x0 on mobile/tablet (*mx-auto* + aspect-ratio child), hiding the photo - added one class **w-full** to the wrapper. Desktop unchanged; mobile/tablet photo renders and box offsets match live to the pixel.

## Verification summary

tsc --noEmit: clean. npm run lint: clean except 2 pre-existing *no-css-tags* warnings in app/layout.tsx. npm run build (production): passes. Browser checks: 15/15 sidebar-gap, 17/17 gap+centering, 14/14 overlap-free, 14/14 column-gap, 3/3 counter sizes, 3/3 counter positions - all passing with screenshots.

Known deviations from the live site (all user-approved): 80px sidebar card gap (live: tighter), capped hero width (live: 143.907% breakout), centered single-doctor card, logo straddling the header divider. Pre-existing notes: /favicon.ico 404s (no favicon file), tailwind.config.ts ESM warning in dev logs, playwright-core sits in runtime dependencies (test-only use).
